

Progress on ambient water quality: Global indicator 6.3.2 updates and acceleration needs

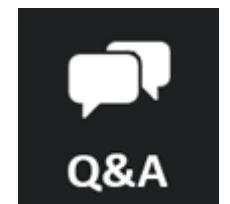

***Proportion of bodies of water
with good ambient water
quality***

Housekeeping

- There is simultaneous interpretation so please select your language by clicking on the **Interpretation** icon at the bottom of your screen
- All participants will be muted during the session
- Please use the chat function for general comments and please share:
 - your name
 - your country
 - your organisation
- Please use the **Q&A function** throughout the session and we will try and answer them during the session
- With any difficulties please message the Tech host using the Chat function

- Share the latest findings of the 2020 data drive
- Encourage participation by those who have not submitted yet
- Showcase the great progress made so far
- Outline actions needed to accelerate this progress to achieve Target 6.3 and Goal 6

Agenda

Indicator overview

Key findings of the 2020 data drive

2021 Feedback process

Country perspective - Chile

Summary of capacity development resources

Outlook and future

Discussion session

Session summary and close

Poll question 1

SDG Target 6.3 starts with the words “*By 2030, improve water quality...*”. In your opinion, how likely is it that water quality will have improved in your country by 2030? (Single choice)

Choice = very unlikely / unlikely / neutral / likely / very likely

La cible 6.3 des ODD commence par les mots "D'ici à 2030, améliorer la qualité de l'eau...". À votre avis, quelle est la probabilité que la qualité de l'eau se soit améliorée dans votre pays d'ici 2030 ? (Choix unique)

Choix = très improbable / improbable / neutre / probable / très probable

La meta 6.3 de los ODS comienza con las palabras "Para 2030, mejorar la calidad del agua...". En su opinión, ¿qué probabilidad hay de que la calidad del agua haya mejorado en su país en 2030? (Una sola opción)

Opción = muy improbable / improbable / neutral / probable / muy probable

Indicator overview

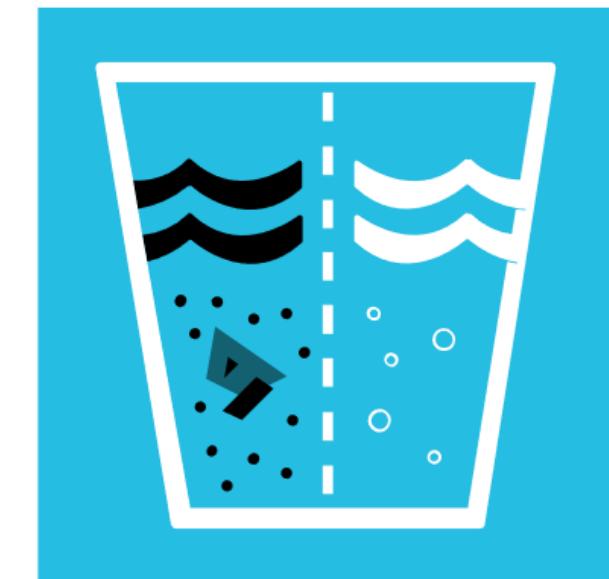

Target 6.3 and Indicator 6.3.2

By 2030, improve water quality by reducing pollution, eliminating dumping and minimizing release of hazardous chemicals and materials, halving the proportion of untreated wastewater and substantially increasing recycling and safe reuse globally

- Indicator 6.3.1 - Proportion of wastewater safely treated
- **Indicator 6.3.2 - Proportion of bodies of water with good ambient water quality**

TARGET 6·3

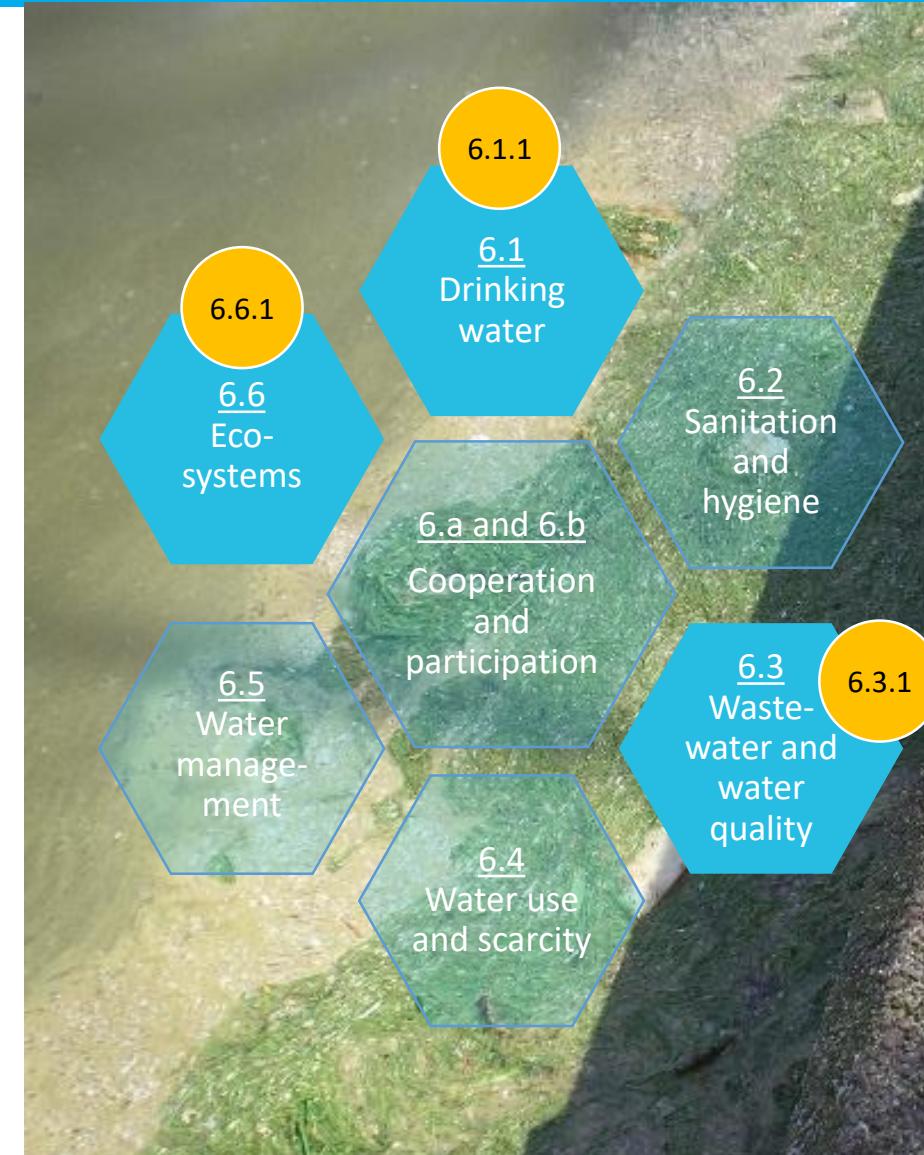

IMPROVE WATER
QUALITY, WASTEWATER
TREATMENT AND SAFE
REUSE

Indicator 6.3.2 supports water management at national level

No information, or inaccurate information, could lead to incorrect management actions, such as:

- Lack of appropriate controls on discharges to waterbodies
- Inadequate treatment to waters used for drinking water supplies
- Delayed or inadequate conservation or remediation of waterbodies and wetlands

Rationale for the indicator

Good ambient water quality does not damage ecosystem function or present a risk to human health

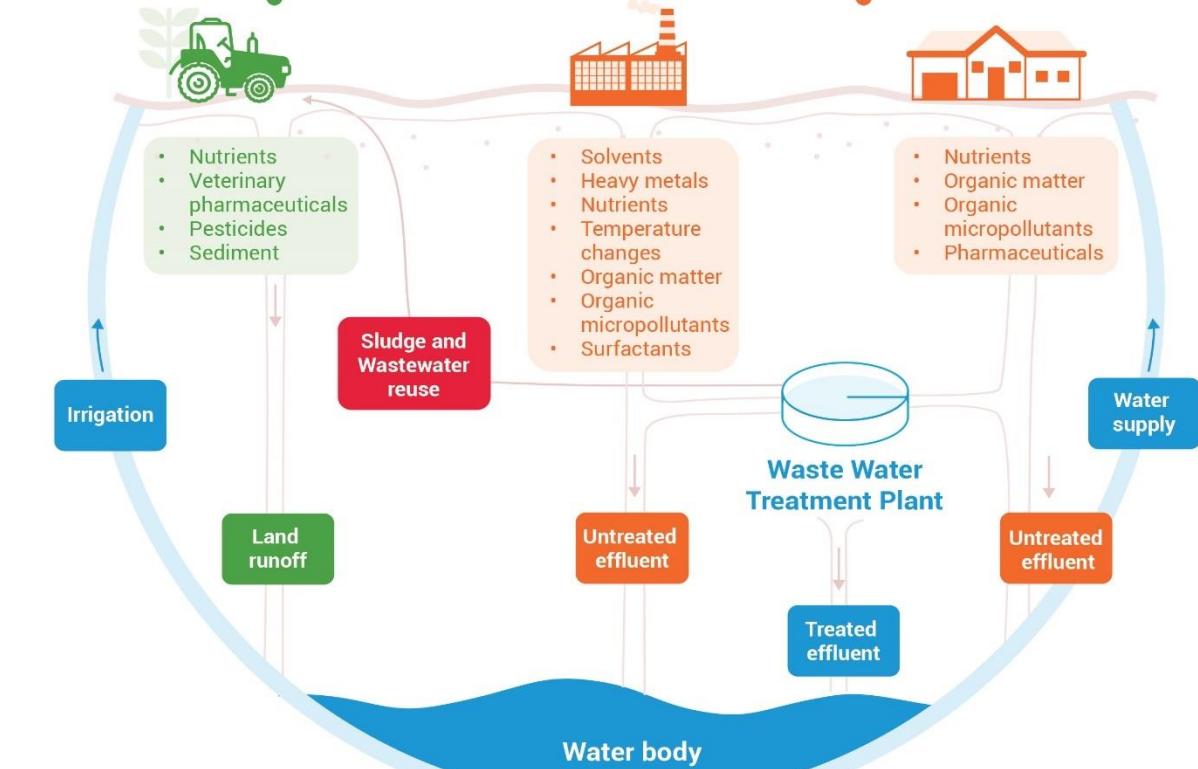

Supports a balanced ecosystem including fisheries

Requires minimum treatment before domestic, agricultural or industrial use

Safe for recreation, such as water contact activities

Agriculture

Agriculture is essential to sustain us, but continues to impact our freshwaters. It is the most widespread cause of poor water quality globally.

Industrial effluent

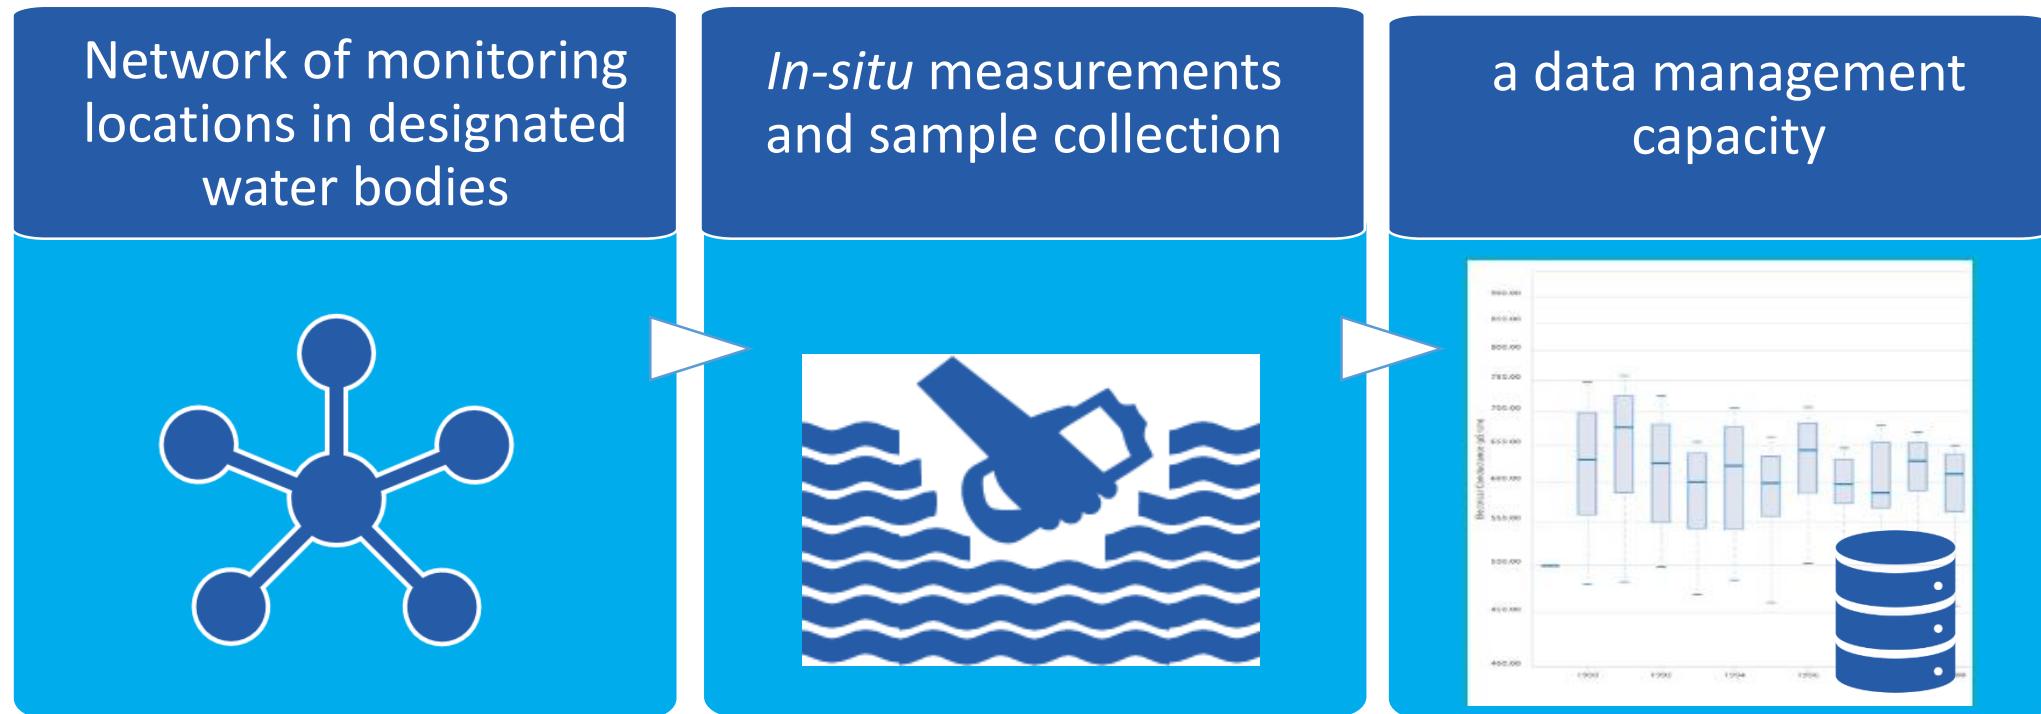

Domestic effluent

Wastewaters can contain a cocktail of toxic compounds. Many of these compounds are not adequately treated in standard wastewater treatment processes and are rarely monitored. They enter our freshwaters in unknown concentrations.

Methodology Description

Indicator 6.3.2 provides information on the current status of freshwater bodies, and how water quality changes over time. But you need:

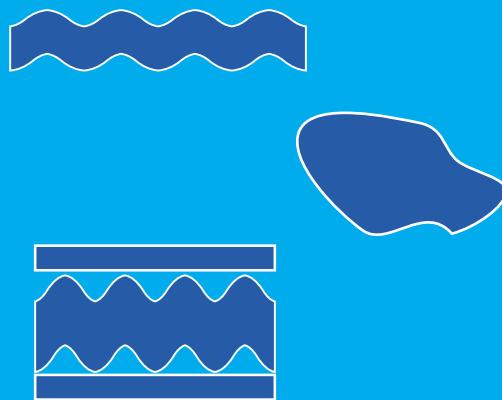

We have learnt that many countries have data gaps, and do not have a clear understanding of the quality of their freshwaters.

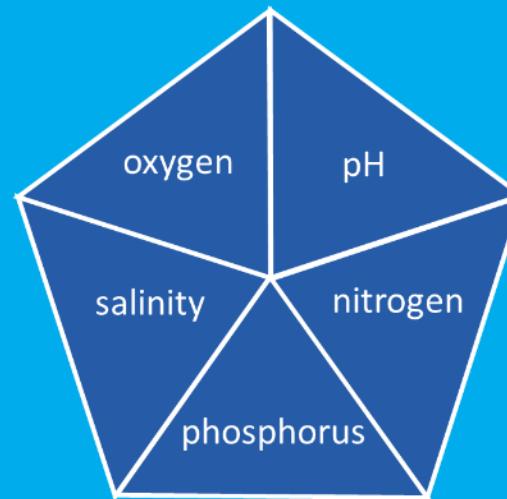

Proportion of bodies of water with good ambient water quality

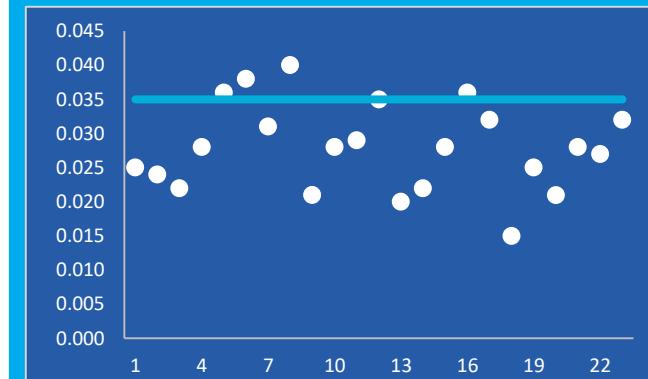

Waterbodies need to be defined within the country:
rivers,
lakes, and
groundwaters

Water quality is classified by comparing measurements with **target values** for specific **parameters** from specific **parameter groups**

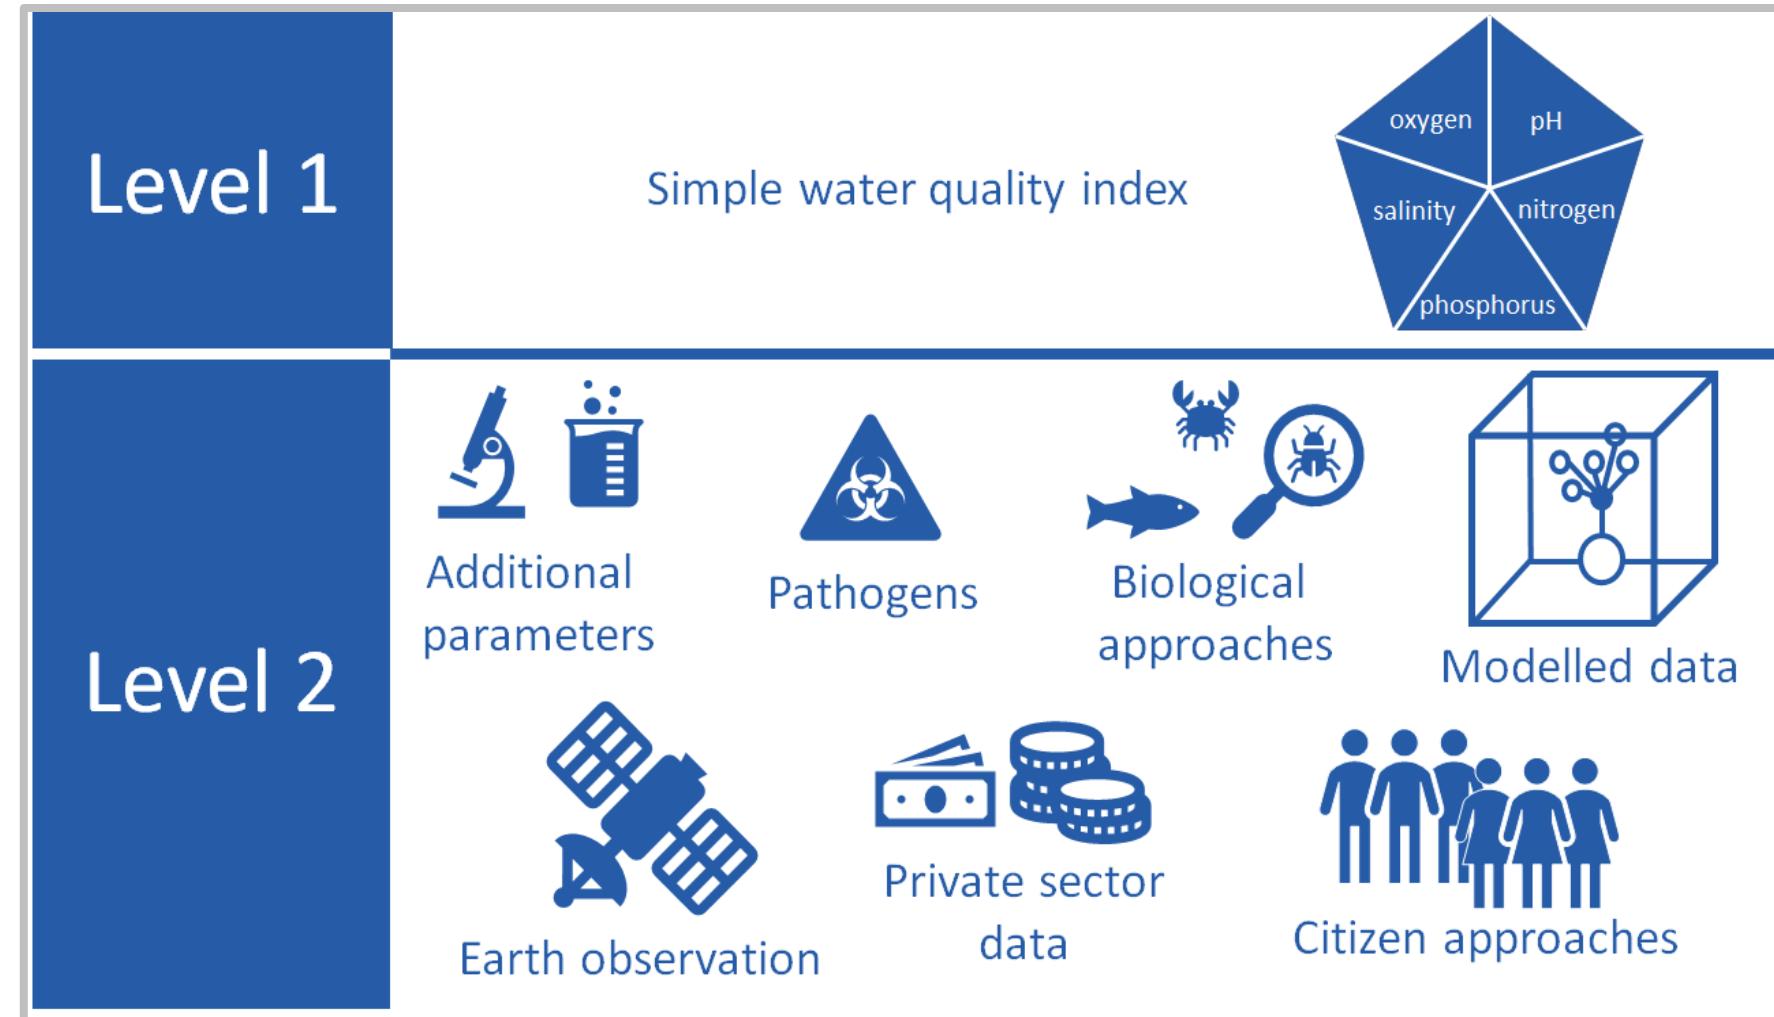

Good water quality represents at least **80%** compliance of measurements with target values

Reporting is done initially at Level 1

There is the option to report at Level 2

Poll question 2

In your opinion – what is the greatest pressure on ambient water quality in your country? (Single choice)

- a. Pollution from mining activities
- b. Domestic wastewater effluent
- c. Pollution from agriculture
- d. Industrial wastewater effluent

A votre avis - quelle est la plus grande pression sur la qualité de l'eau ambiante dans votre pays ? (Choix unique)

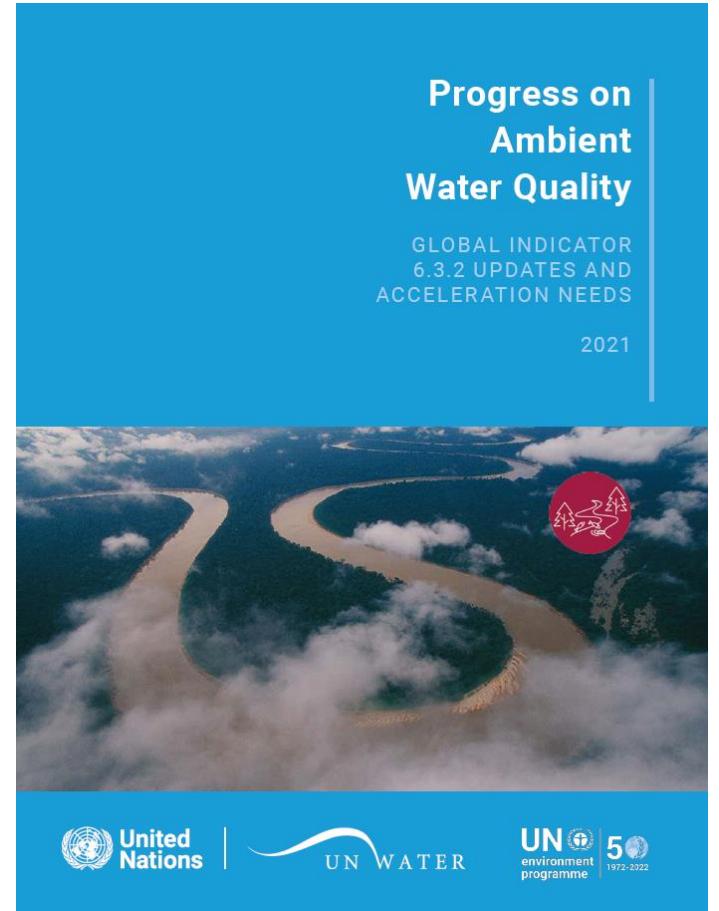

- a. La pollution due aux activités minières
- b. Les effluents d'eaux usées domestiques
- c. La pollution d'origine agricole
- d. Les effluents d'eaux usées industrielles

En su opinión, ¿cuál es la mayor presión sobre la calidad del agua ambiental en su país? (Una sola opción)

- a. Contaminación por actividades mineras
- b. Efluentes de aguas residuales domésticas
- c. Contaminación procedente de la agricultura
- d. Efluentes de aguas residuales industriales

Summary results of 2020 data drive

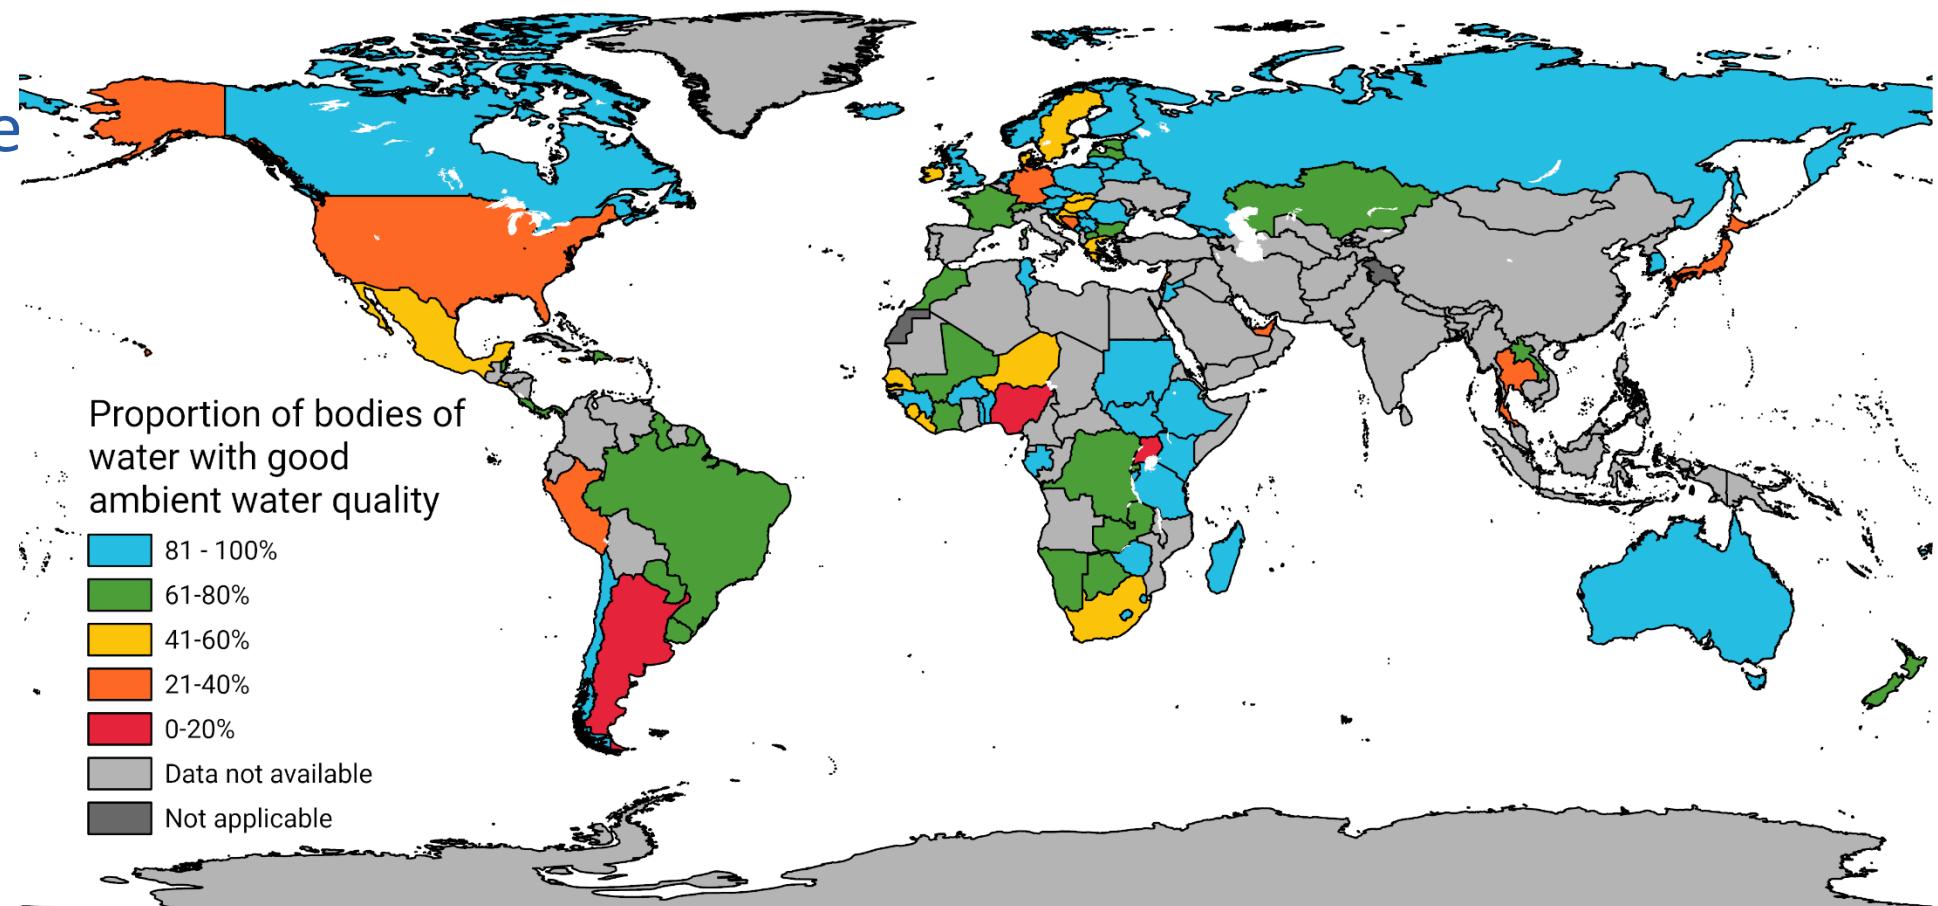

The report is now available in all UN languages

<https://www.unwater.org/publications/progress-on-ambient-water-quality-632-2021-update/>

Summary results from 2020 data drive

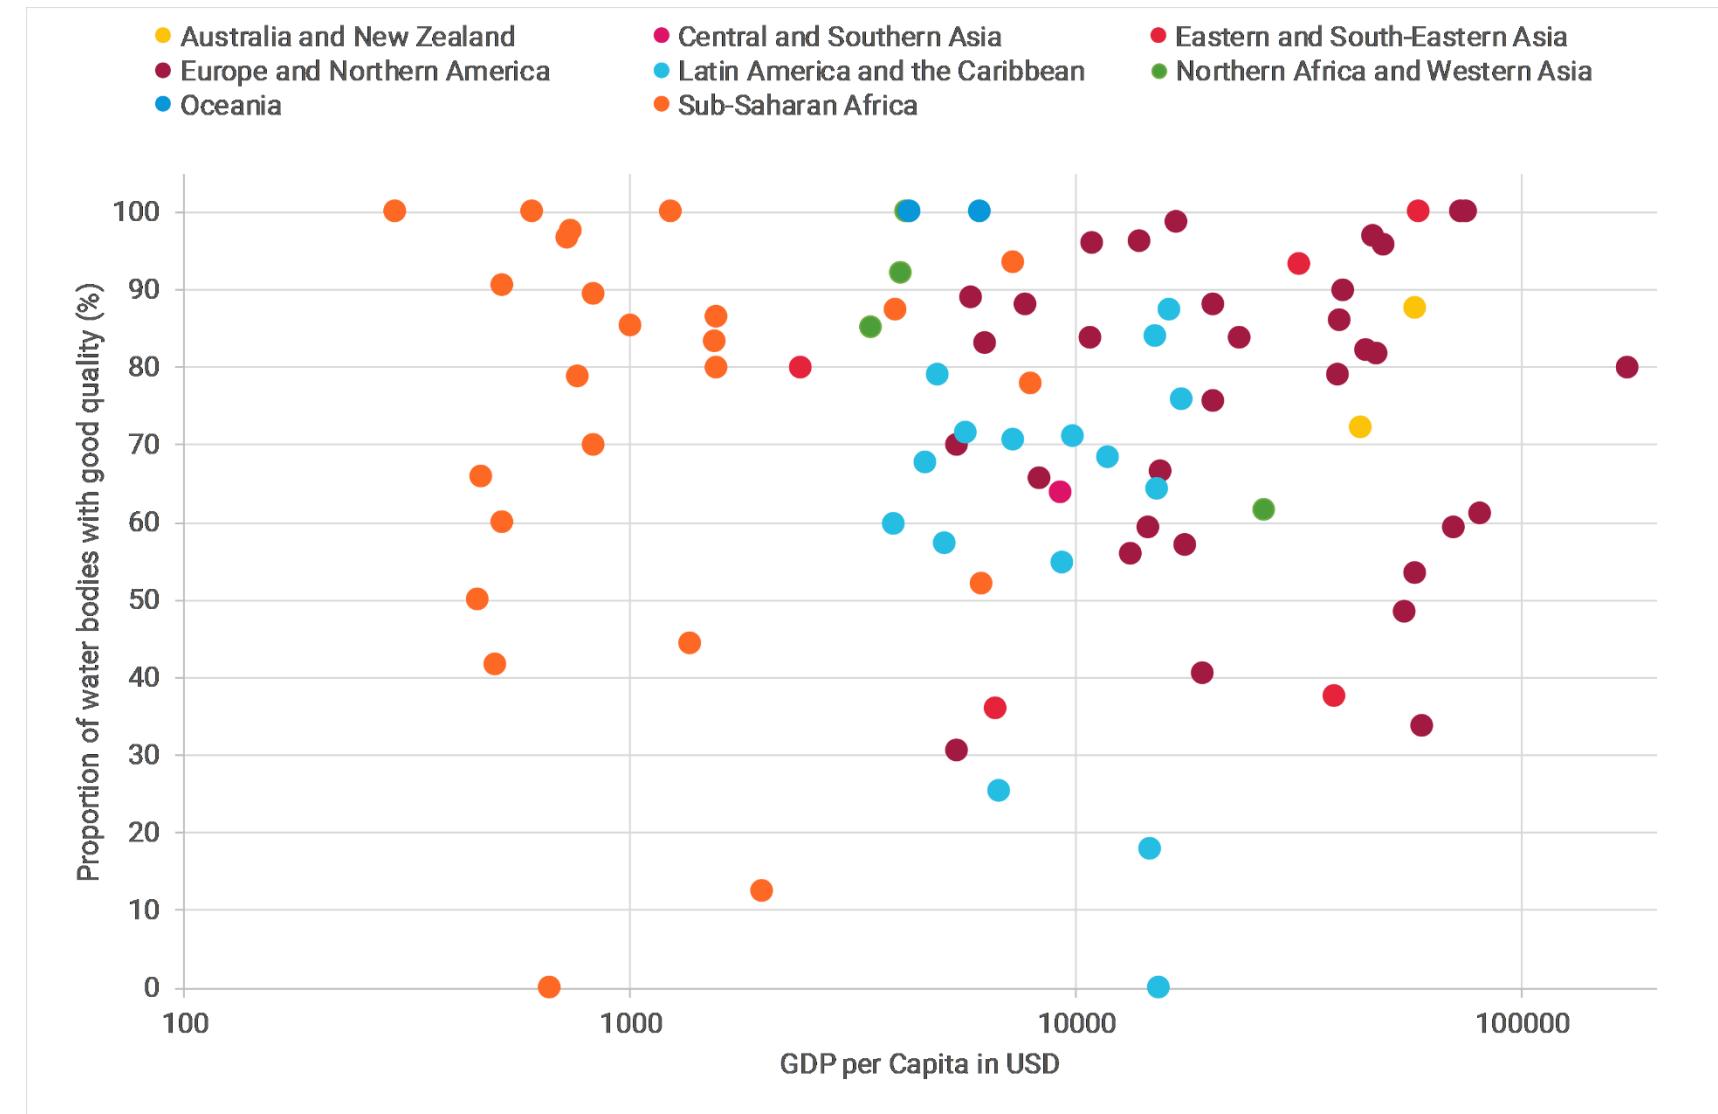

- 97 submissions
- Over 100 % more than in 2017
- Gaps in Central and Southern Asia and Arab Region

Summary results from 2020 data drive

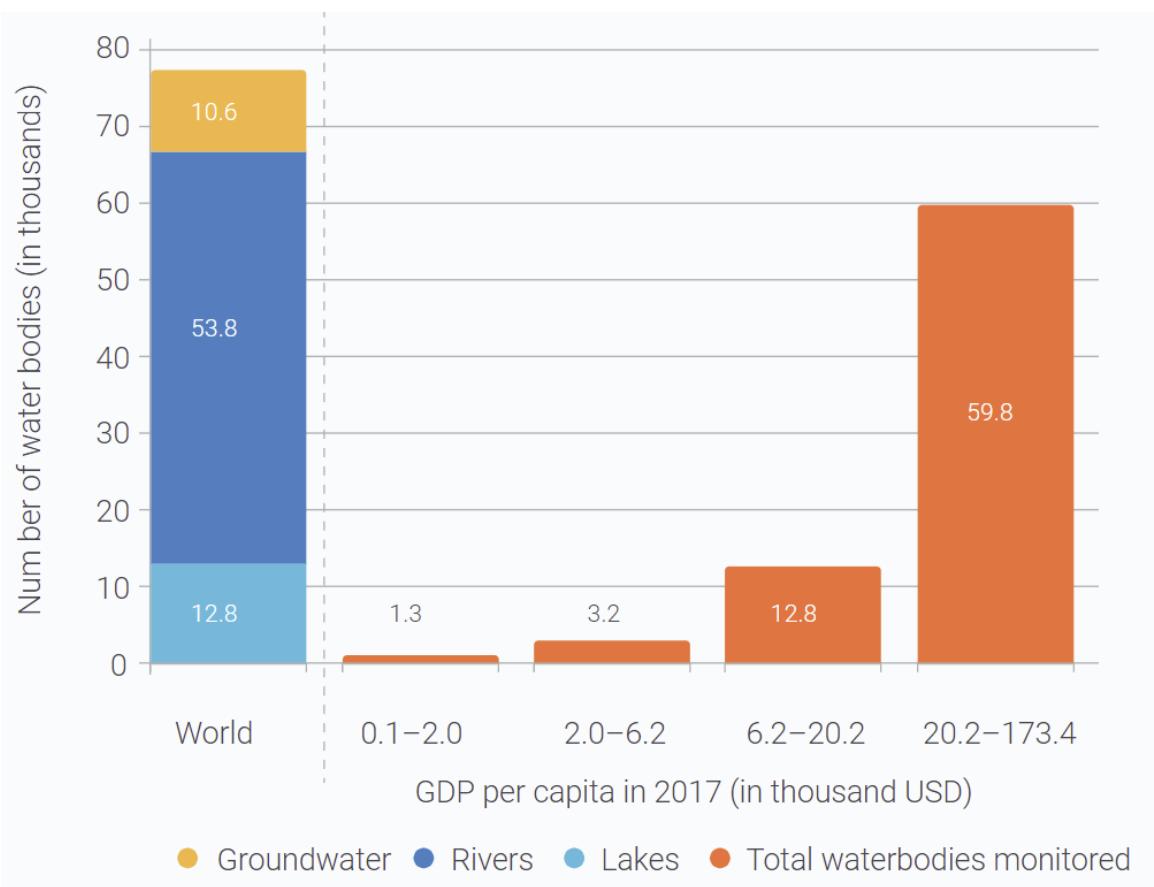

Good and poor water quality reported in all world regions

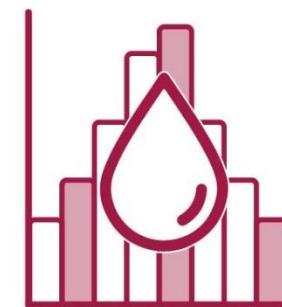

Richer countries used more data to calculate their indicator

Only
1%
of water
bodies

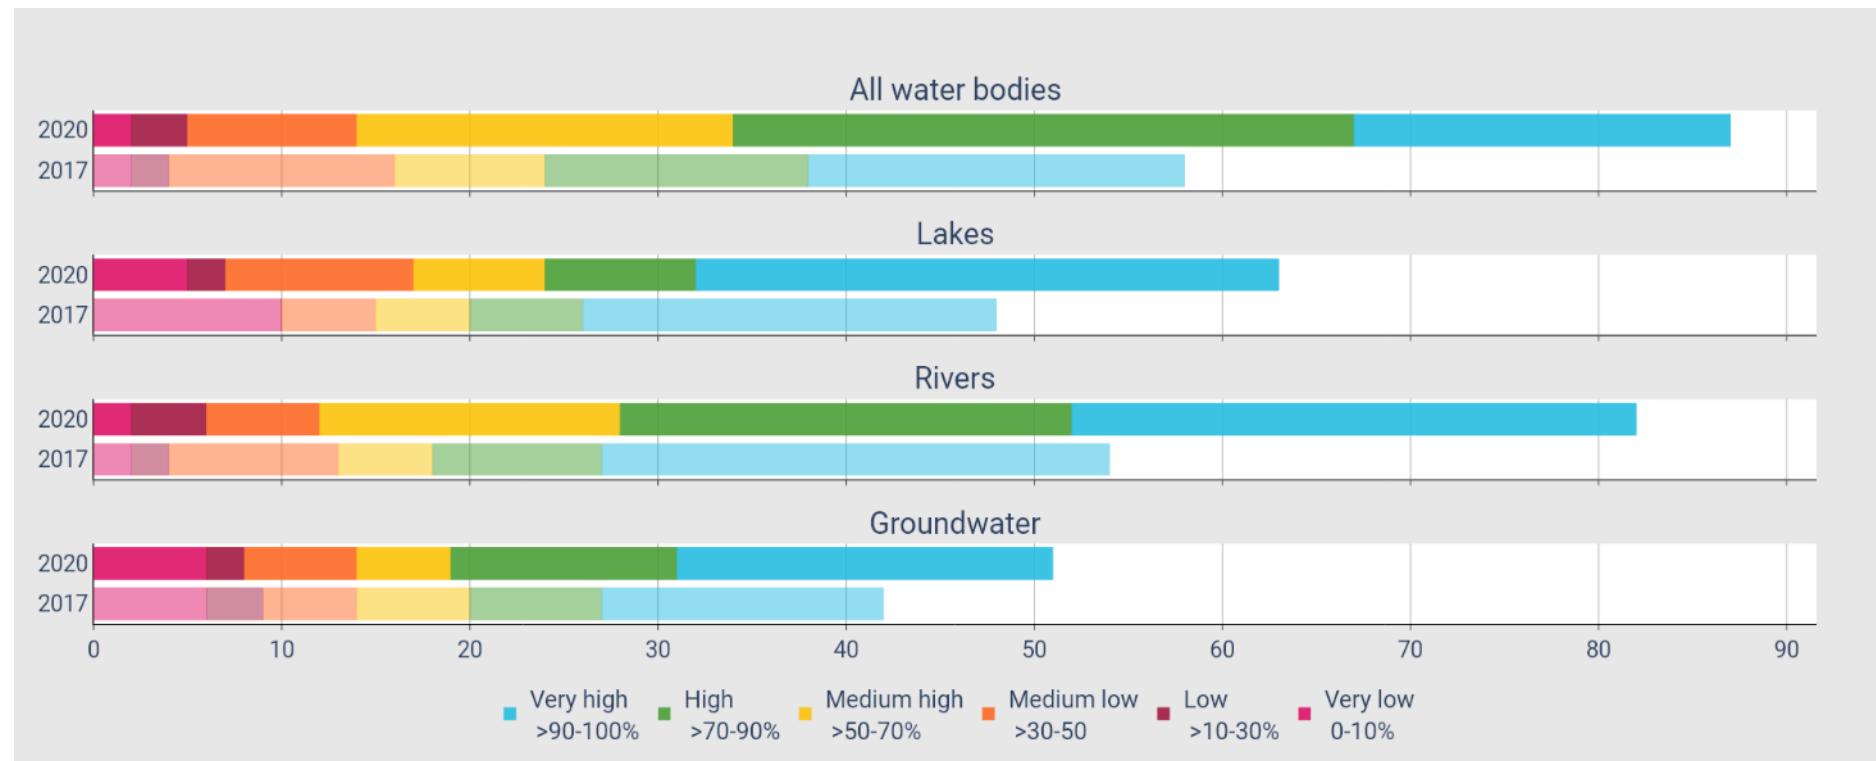

where we have information are
in the
20!
lowest GDP countries

In low-GDP countries,
there is an **urgent need** for
better data on the **health**
of rivers, lakes and
groundwater

Fewer countries reported on groundwaters compared with surface waters

Poll question 3

In your opinion, please select the action most urgently needed to improve water quality in your country? (Single choice)

- a. Increase the amount of wastewater treated
- b. Improve wastewater treatment technologies
- c. Improve agricultural management practices
- d. Enforce existing legislation designed to protect water quality
- e. Address industrial pollution
- f. Address pollution associated with mining activities
- g. Strengthen water quality monitoring and assessment programmes.
- h. Raise awareness and importance of water quality issues with the general public

À votre avis, veuillez sélectionner l'action la plus urgente pour améliorer la qualité de l'eau dans votre pays ? (Choix unique)

- a. Augmenter la quantité d'eaux usées traitées
- b. Améliorer les technologies de traitement des eaux usées
- c. Améliorer les pratiques de gestion agricole
- d. Appliquer la législation existante visant à protéger la qualité de l'eau
- e. S'attaquer à la pollution industrielle
- f. S'attaquer à la pollution liée aux activités minières
- g. Renforcer les programmes de surveillance et d'évaluation de la qualité de l'eau.
- h. Sensibiliser le grand public aux problèmes de qualité de l'eau et à leur importance.

En su opinión, seleccione la acción que se necesita con mayor urgencia para mejorar la calidad del agua en su país. (Una sola opción)

- a. Aumentar la cantidad de aguas residuales tratadas
- b. Mejorar las tecnologías de tratamiento de aguas residuales
- c. Mejorar las prácticas de gestión agrícola
- d. Aplicar la legislación existente destinada a proteger la calidad del agua
- e. Abordar la contaminación industrial
- f. Abordar la contaminación asociada a las actividades mineras
- g. Reforzar los programas de control y evaluación de la calidad del agua
- h. Sensibilizar al público en general sobre la importancia de la calidad del agua

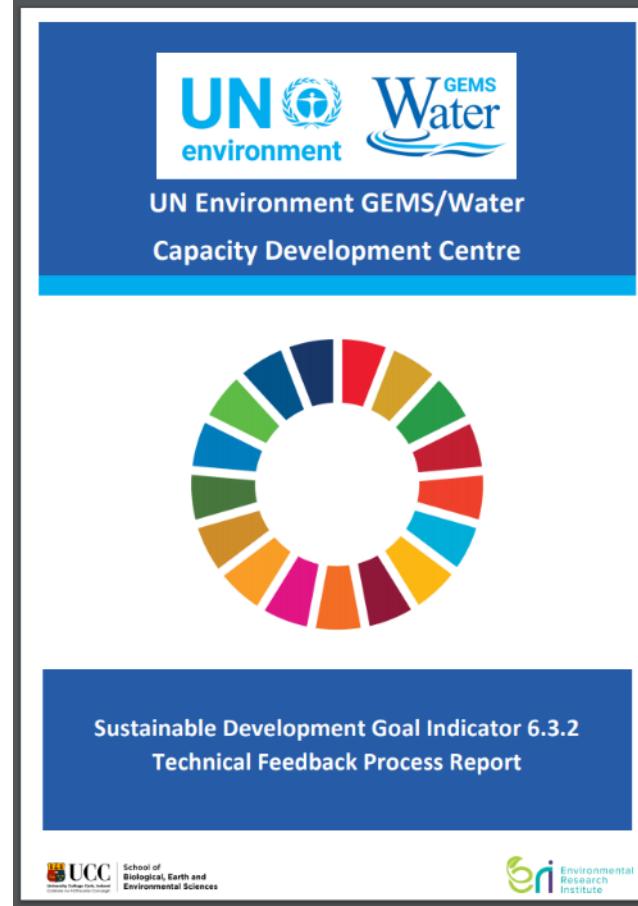

Feedback process 2021

2018 feedback process:

- To maximise global participation,
- enhance the national relevance of indicator 6.3.2, and to
- ensure that submissions are globally comparable

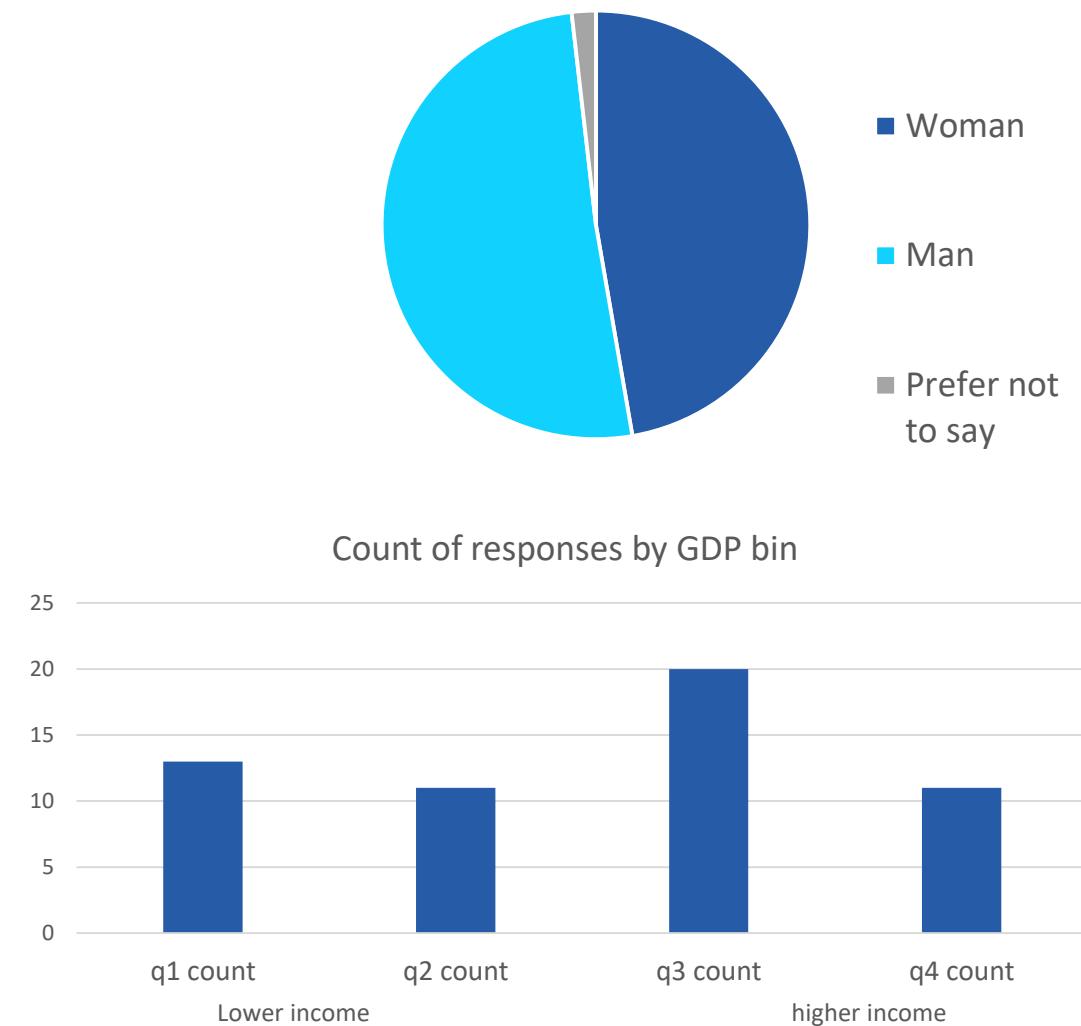

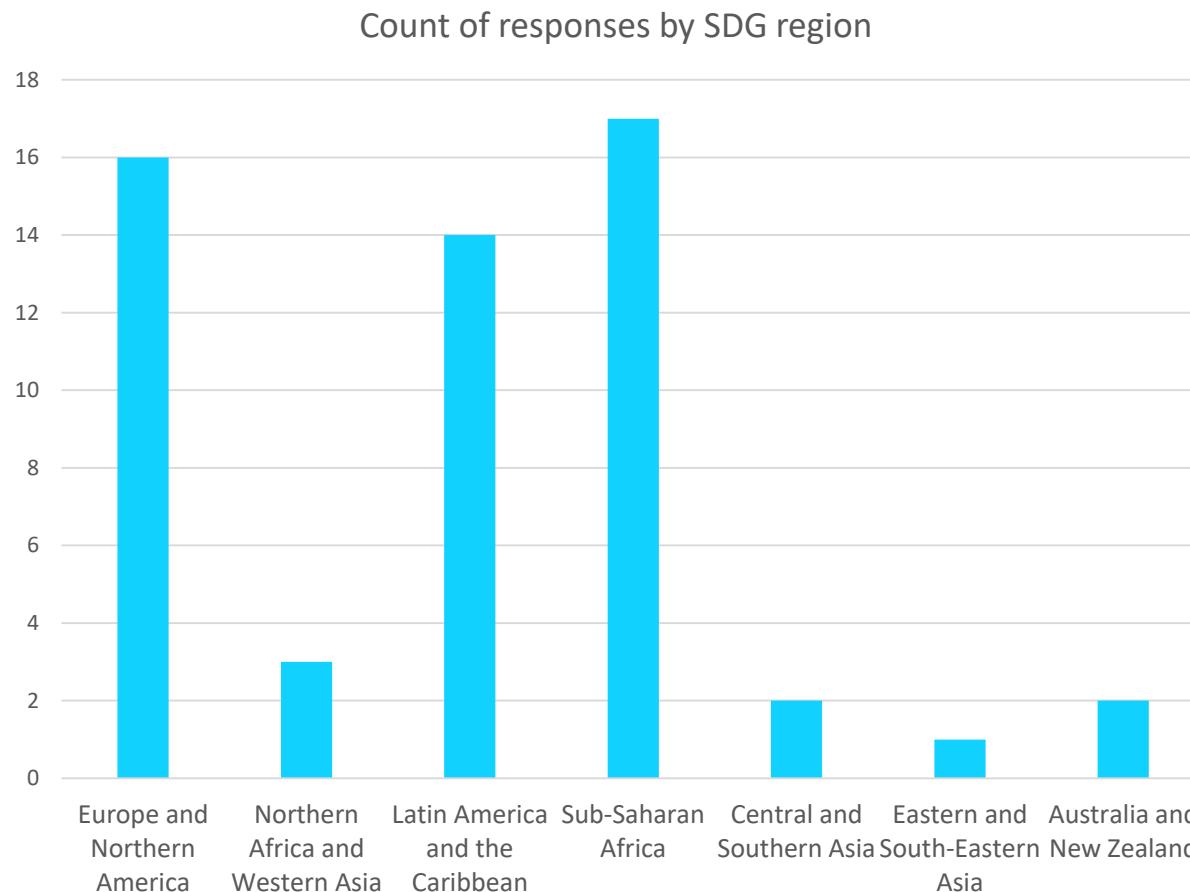

2021 feedback process:

- increase the impact of the indicator;
- increase global participation;
- improve the information it provides; and,
- ensure that countries have the requisite information to support actions aimed at improving water quality by 2030.

Feedback and review

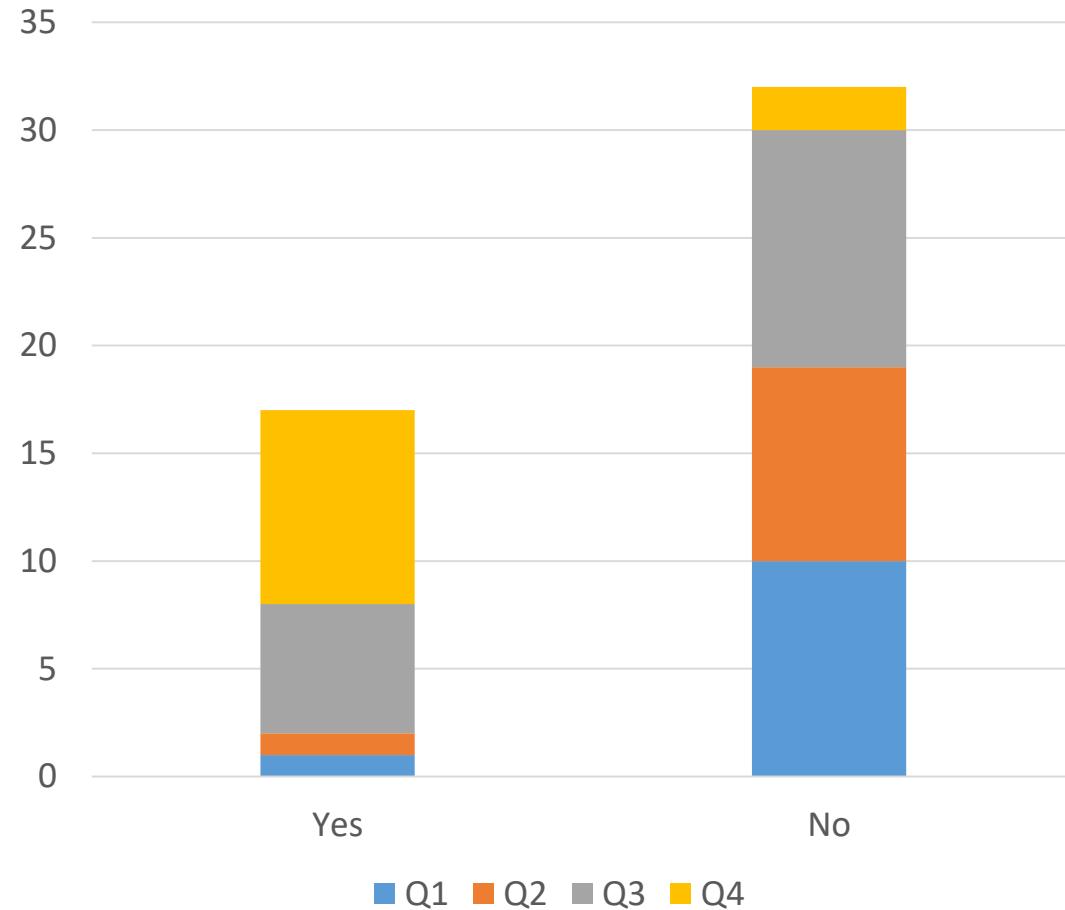

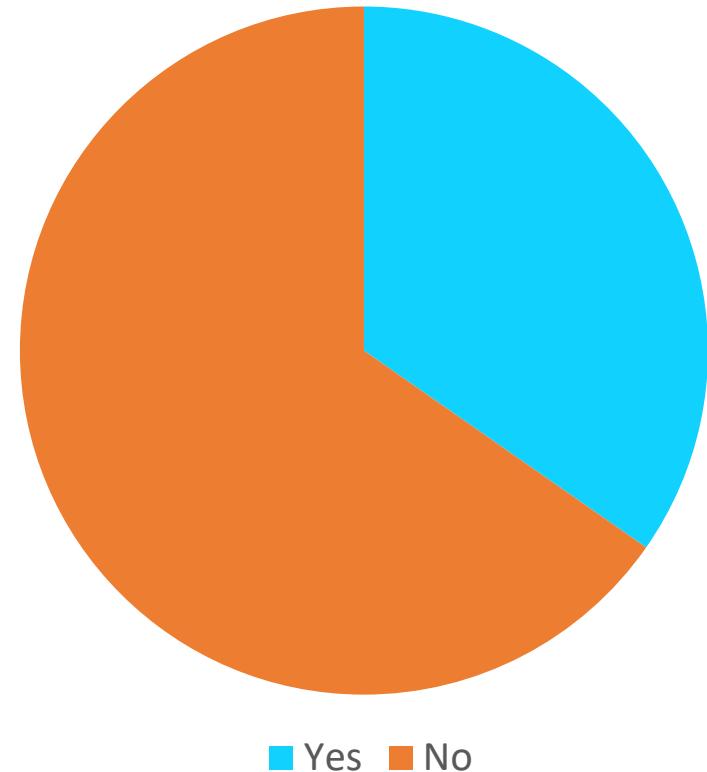

Analysis of responses – 55 in total

Feedback and review

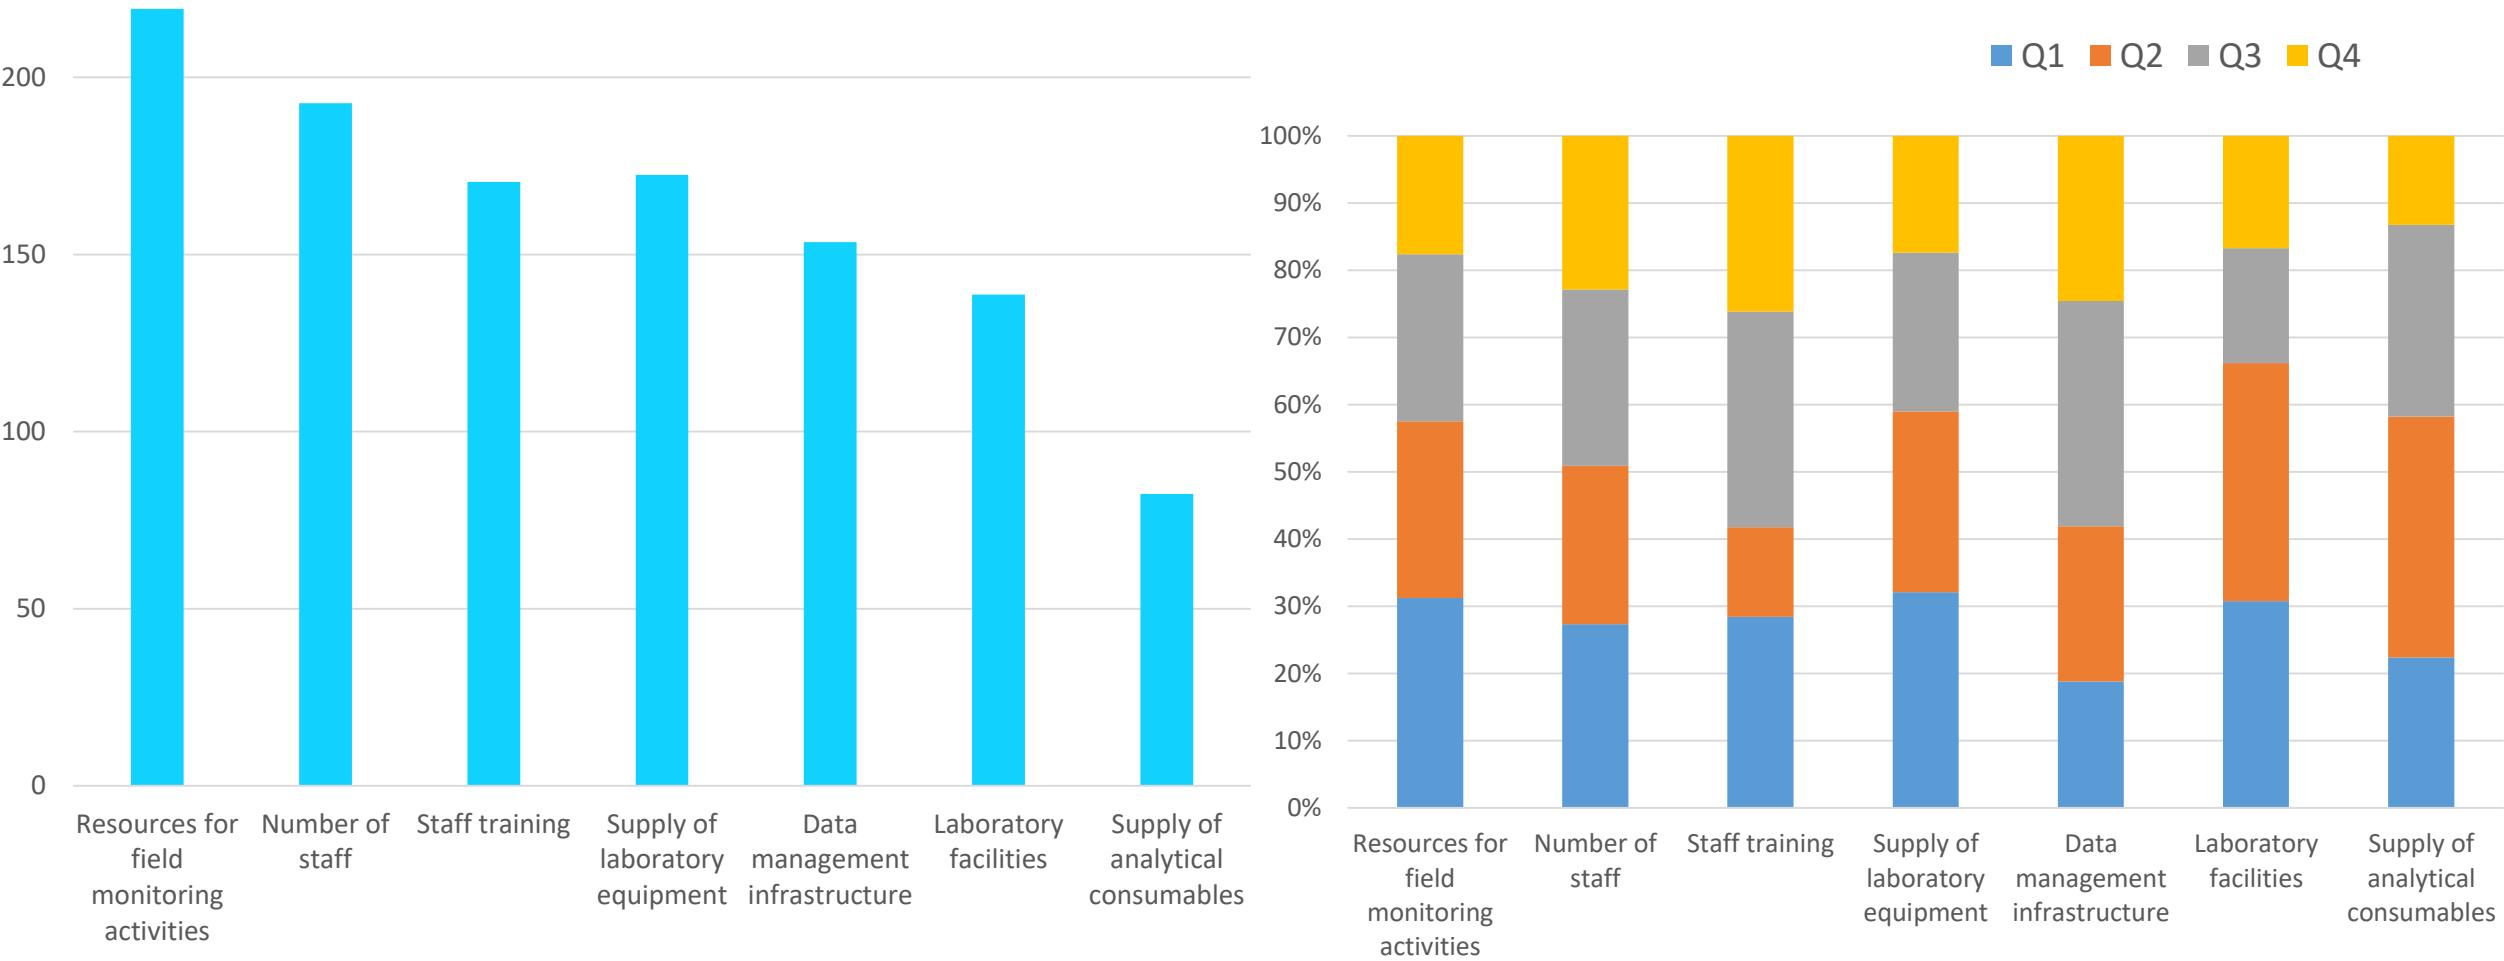

Are water quality monitoring and assessment programmes suitably funded in your country?

Feedback and review

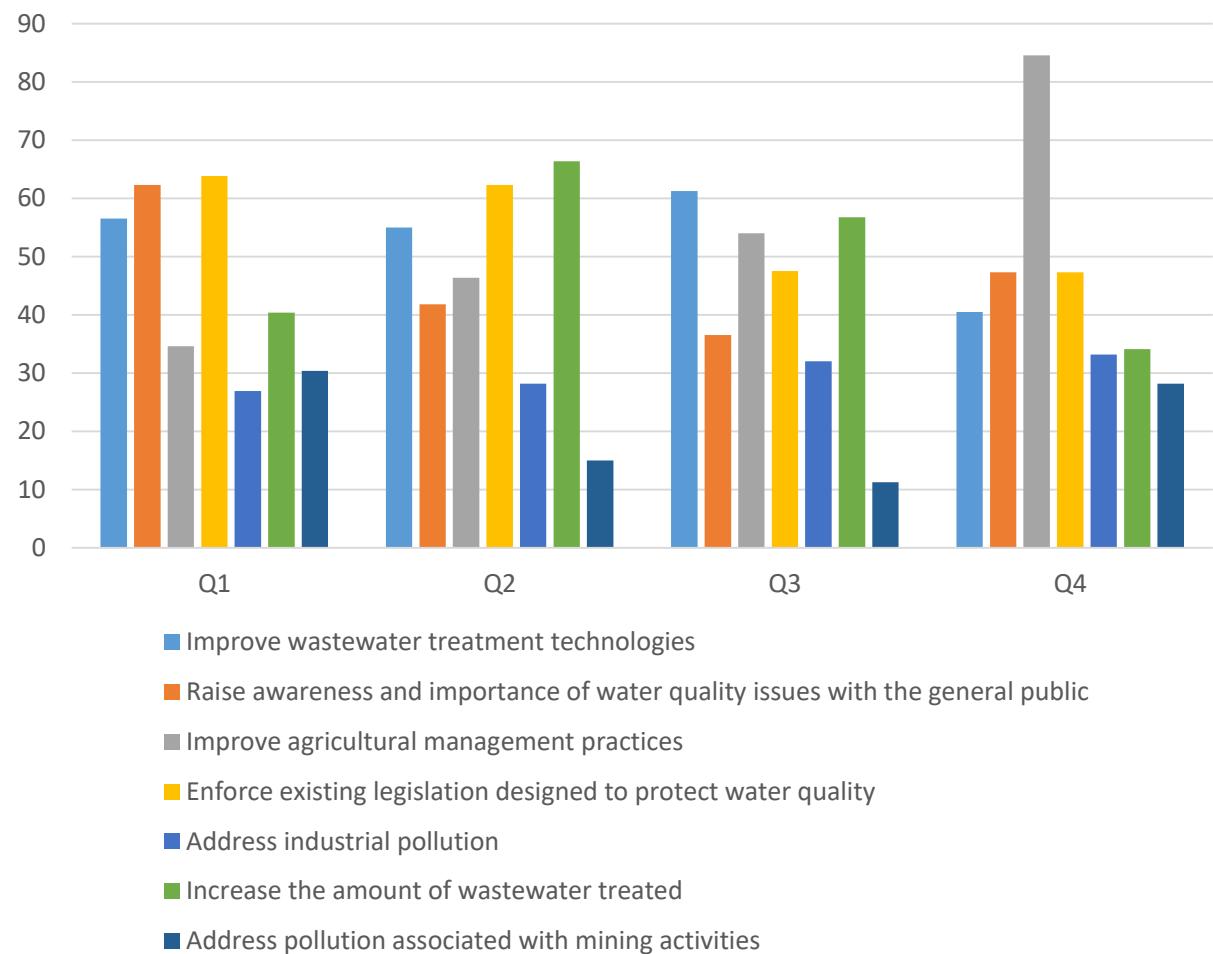

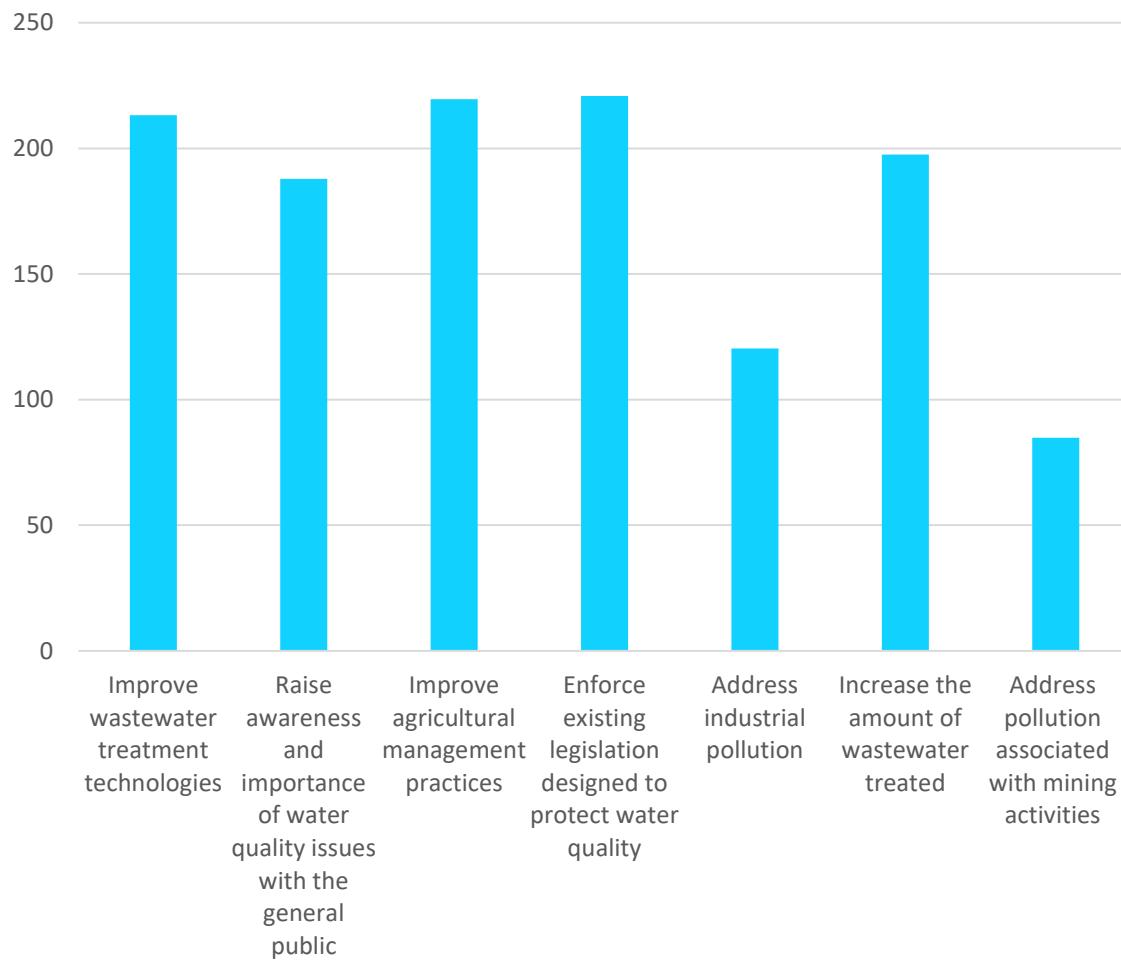

Please rank the areas that need support most urgently to report for SDG indicator 632?

Feedback and review

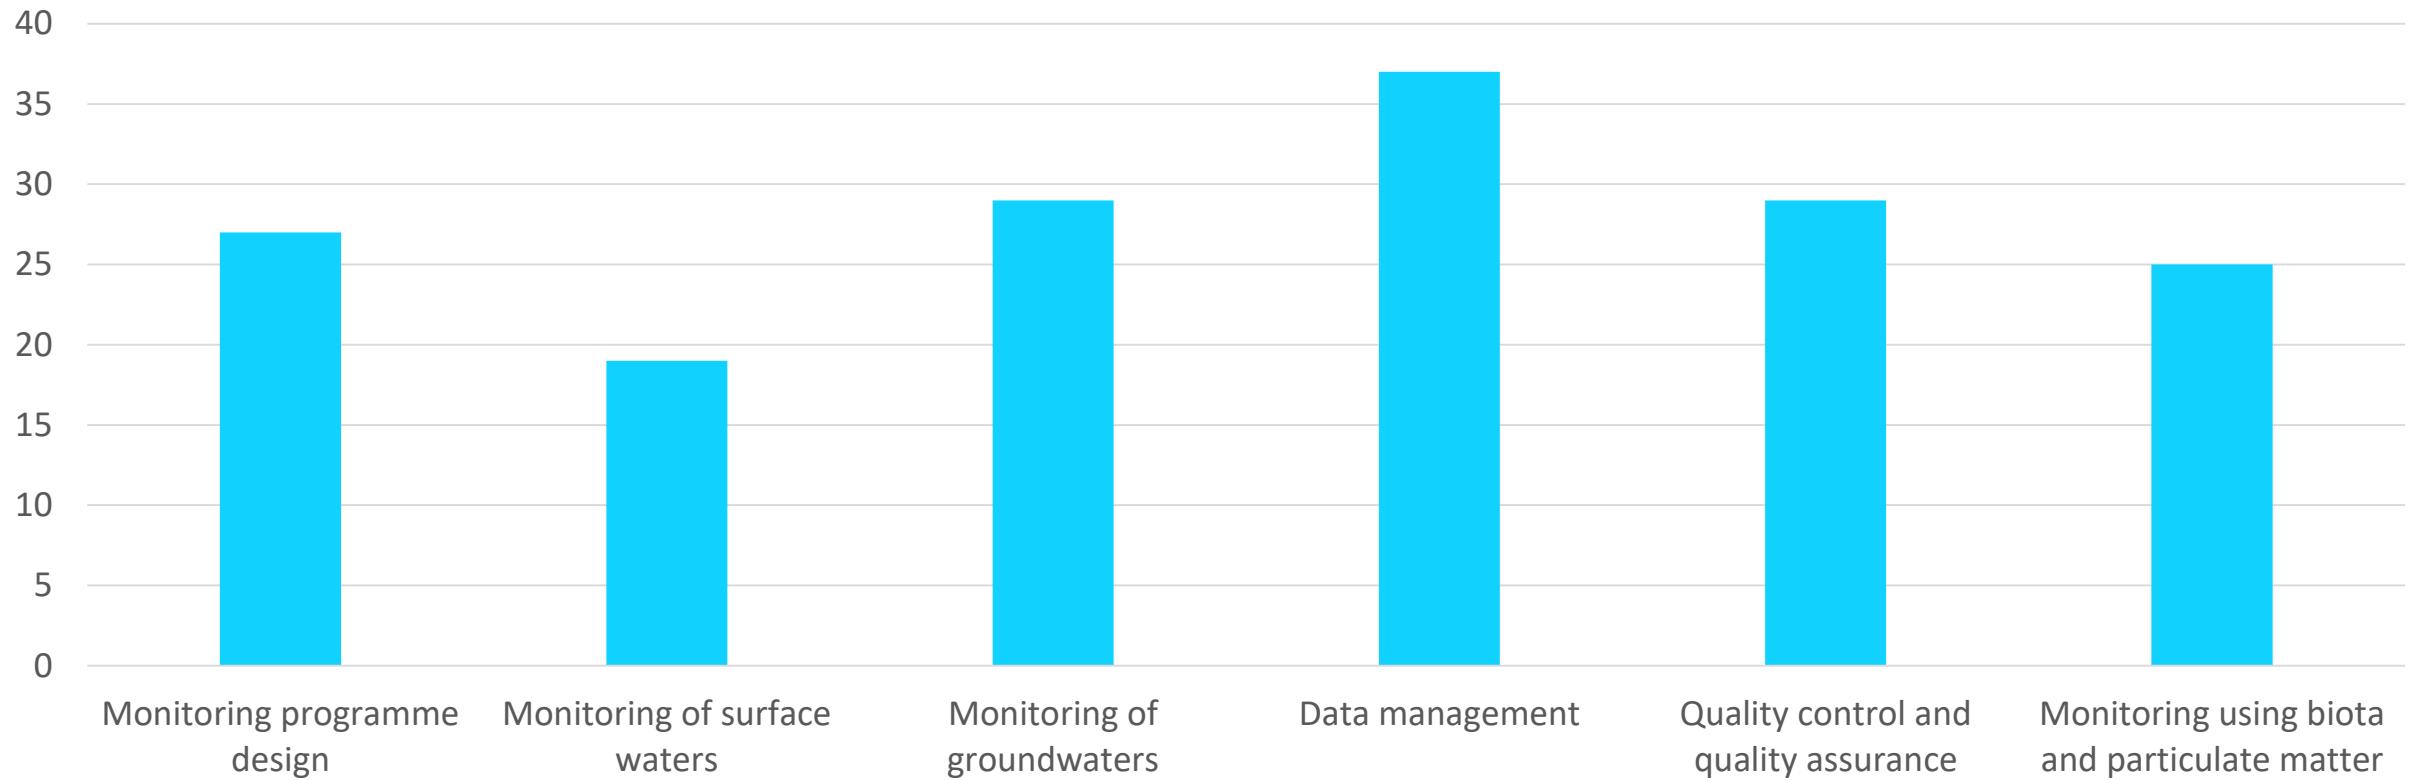

In your opinion, please rank (by dragging) the action most urgently needed to improve water quality in your country?

Feedback and review

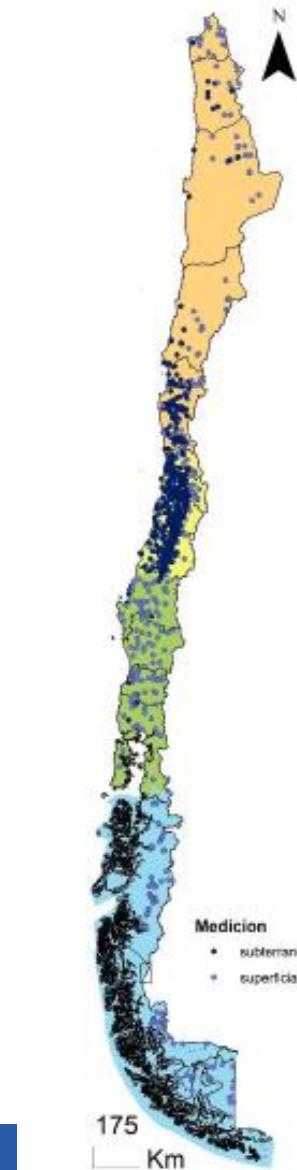

To improve ambient water quality monitoring and assessment in your country, which area of training needs to be addressed most urgently? (Multiple answers possible. Please use "other" box to elaborate).

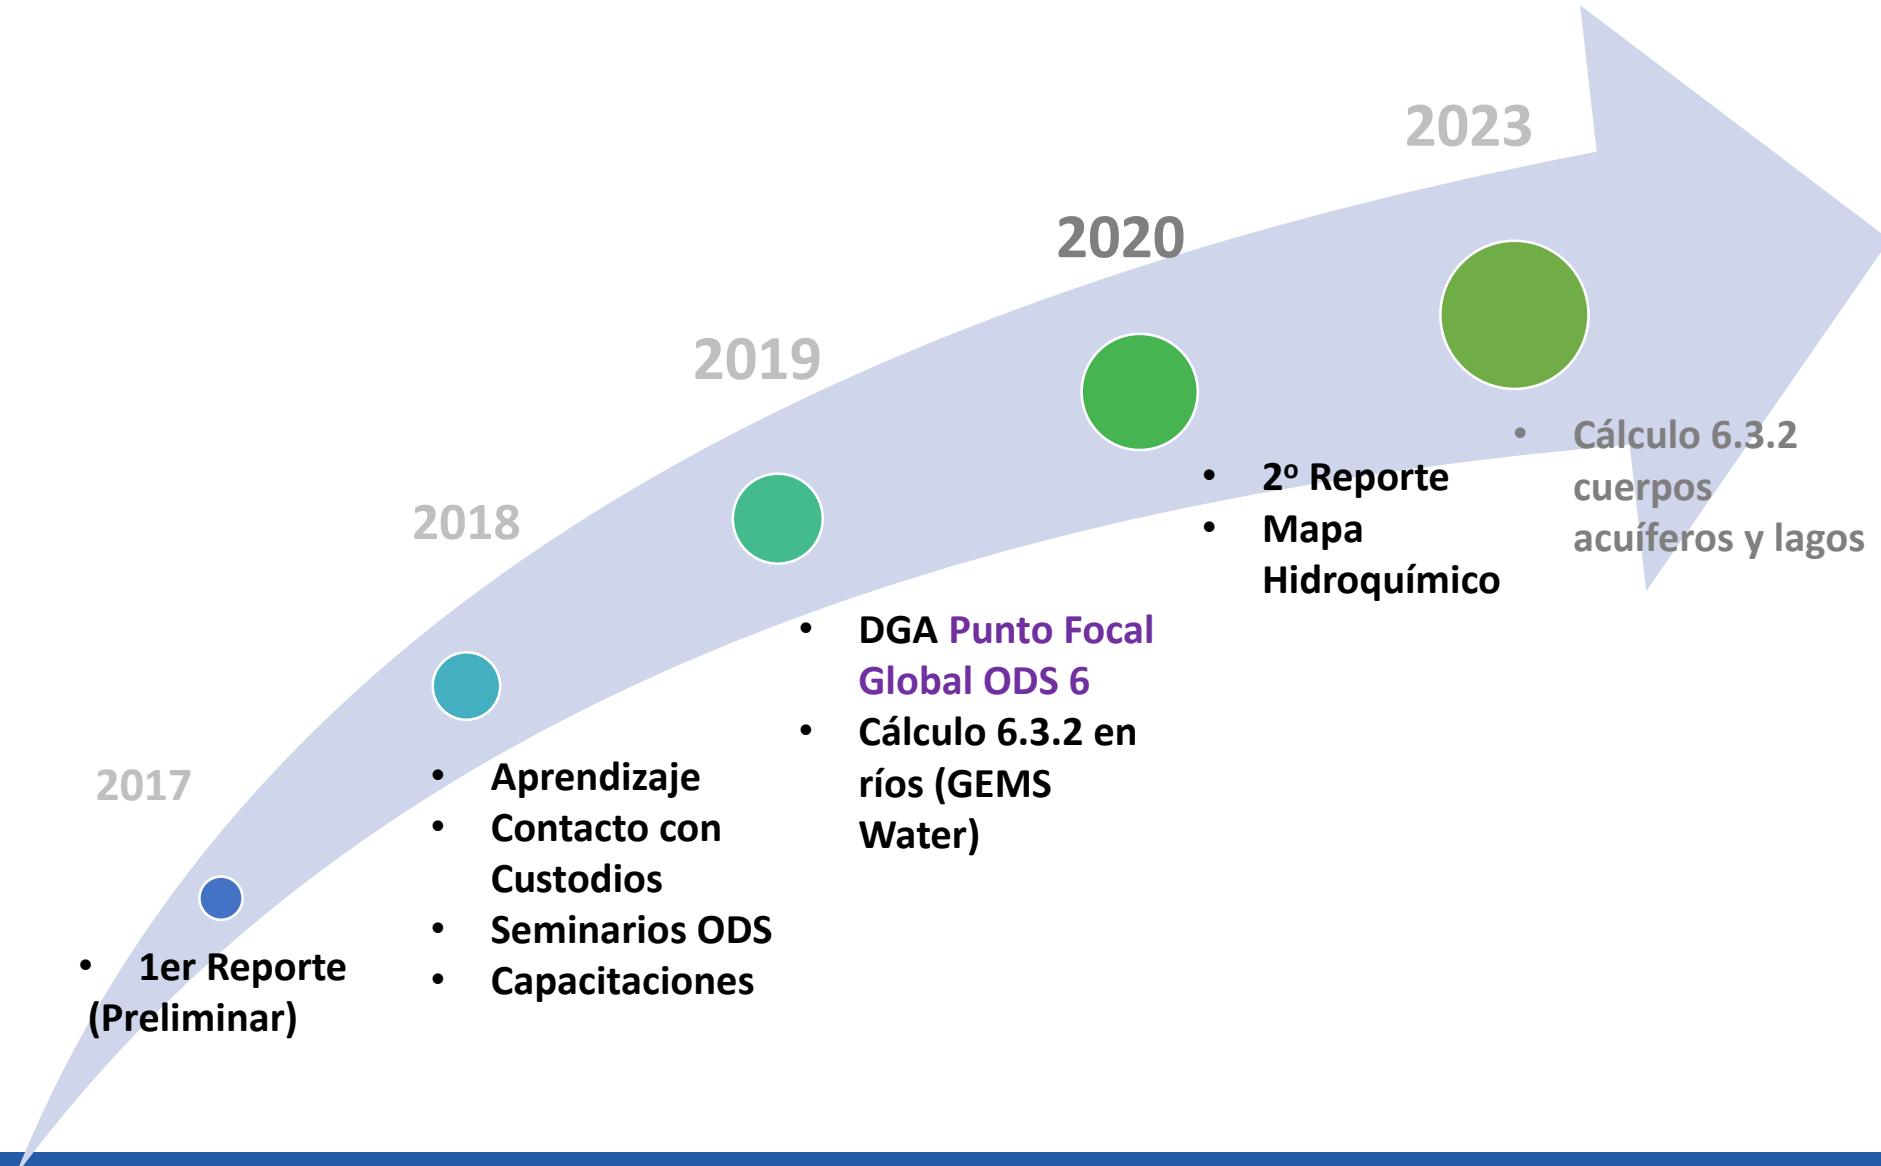

Indicador 6.3.2 – Experiencia Chilena

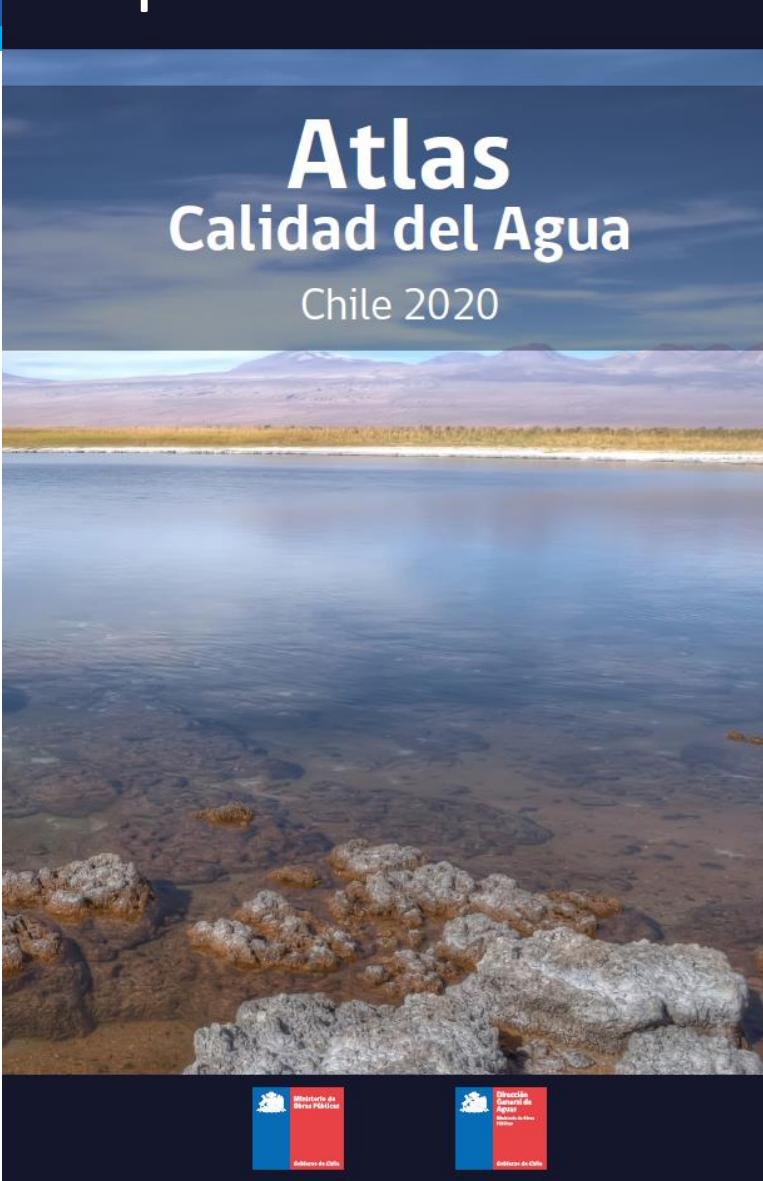

- Ministerio de Obras Públicas Dirección General de Aguas (DGA)
- 1. Planificar el desarrollo del agua en las fuentes naturales.
- 2. Ejercer la **policía y vigilancia** de las aguas en los cauces naturales de uso público y acuíferos.
- 3. **Investigar y medir** el agua y **monitorear calidad y cantidad** para su conservación y protección.
- Monitoreo de agua:
 - Red fluviométrica
 - Red de niveles
 - Red de glaciología
 - Red de sedimentos
 - **Red de Calidad**
 - **Superficial= 755**
 - **Subterráneas = 865**

Supports in place and
look to the future

Available Support Options: Indicator Support Platform

SDG 6 Support Platform

- Introduction to Indicator 6.3.2
 - Technical Guidance Documents and videos
 - Detailed Level 1 Reporting Workflow
- Description
- Case studies
 - Helpdesk function at sdg632@un.org
 - Bilateral teleconferences

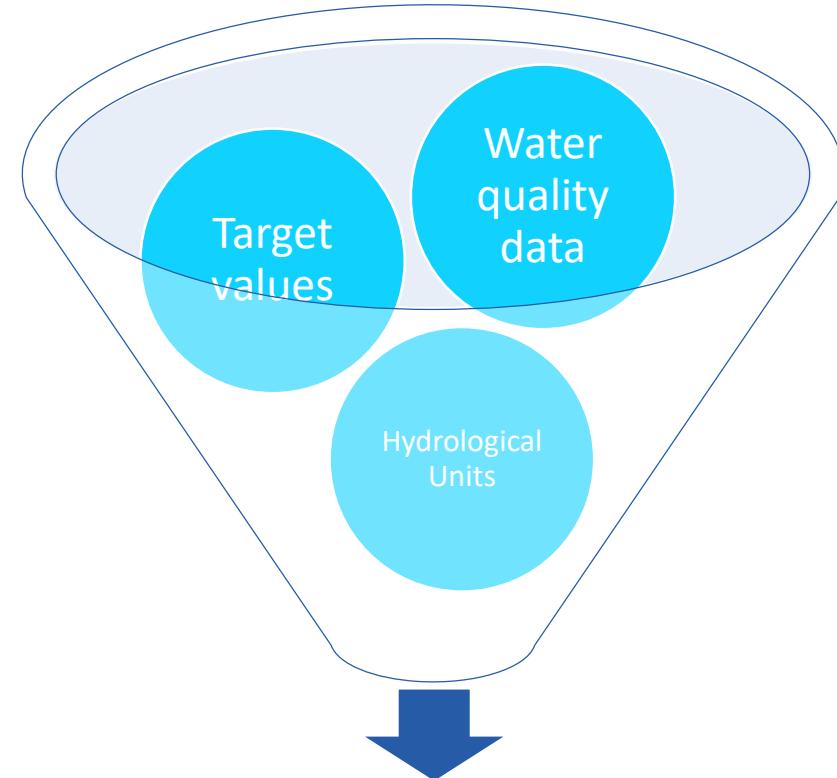

The screenshot displays the 'Documents and Materials' section of the SDG 6 Support Platform. At the top, there is a header with the UN Environment logo and a 'New Update' button. Below the header, the page title is 'SDG 6.3.2'. A sidebar on the left lists 'SDG 6.3.2' under 'SDG 6.3.2' and includes links for 'SDG 6.3.2 Action', 'Documents and Materials', 'FAQ', and 'About'. The main content area is titled 'Available support and information on SDG Indicator 6.3.2' and includes a note about reporting support. It features a grid of resources categorized by language: English, Français, Español, العربية, 中文, and 日文. The resources include 'Introduction to Indicator 6.3.2' (documents and videos), 'Reporting Guidelines' (Level 1 Reporting Template, Reporting Workflow Description, Level 1 Reporting Template Demonstrated, Level 2 Questionnaire, and Level 2 Guidance), and 'Technical Support Information' (Monitoring Programme Design Document, Monitoring Programme Design Presentation, Target Values Document, Target Values Presentation, Monitoring and Reporting on Groundwater Document, and Monitoring and Reporting on Groundwater). Each resource is accompanied by a thumbnail image and a link.

Indicator Calculation Service

Countries can also choose to have their indicator score calculated on their behalf by the GEMS/Water

Indicator Score

Available Support Options: Optional Target values

Parameter Group	Parameter	Target type	Rivers	Lakes	Groundwaters
Acidification	pH	range	6 – 9	6 – 9	6 – 9
Salinity	Electrical conductivity*	upper	500 $\mu\text{S cm}^{-1}$	500 $\mu\text{S cm}^{-1}$	500 $\mu\text{S cm}^{-1}$
Oxygenation	Dissolved oxygen	range	80 – 120 (% sat)	80 – 120 (% sat)	-
Nitrogen	Total Nitrogen	upper	700 $\mu\text{g N l}^{-1}$	500 $\mu\text{g N l}^{-1}$	-
	Oxidised nitrogen	upper	250 $\mu\text{g N l}^{-1}$	250 $\mu\text{g N l}^{-1}$	250 $\mu\text{g N l}^{-1}$
Phosphorus	Total phosphorus	upper	20 $\mu\text{g P l}^{-1}$	10 $\mu\text{g P l}^{-1}$	-
	Orthophosphate	upper	10 $\mu\text{g P l}^{-1}$	5 $\mu\text{g P l}^{-1}$	-

* For EC a better approach is to use a deviation from normal rather than specific numerical value

The GEMS/Water Capacity Development Centre has:

- engaged with 107 countries
- the online courses and *in situ* workshops have reached 126 people from 43 countries alone
- The postgraduate diploma and master's degree courses have been undertaken by 35 students to date

The screenshot shows the 'In This Section' sidebar of the website. The 'On-line Courses' link is highlighted with a red box. To the right, the main content area displays the 'On-line Courses' section, which includes a heading, a 'Short on-line courses' section with a link to CPD Short Courses, course homepage links, and a list of short courses with their respective URLs.

Outlook and Way Forward

Improve the reporting workflow,

- Incorporate feedback into indicator implementation
- Design and deliver the *SDG 632 Online Hub*
- Continue to collect **Level 1** indicator data
- Start to collect **Level 2** indicator data

- What are the challenges faced by country focal points to report, and how can UNEP help to overcome these?
- Design of *SDG 632 Online Hub* – which features are most needed?

Summary and closing remarks

- Information on water quality is essential for management
- Significant progress already:
 - Many more countries engaging
 - New monitoring programmes being developed
 - Many countries developing their own ambient water quality standards for the first time
- We know there are gaps and need to:
 - continue to build capacity to monitor and assess water quality
 - promote data access and sharing between organisations and countries
- Protection is easier than restoration, so efforts to protect water bodies in good condition should be initiated now
- Improving farming management practices, and the rate and type of wastewater treatment are essential if water quality is to be improved

Thank you
