

SDG 6.4.1 CHANGE IN WATER-USE EFFICIENCY

Water-use efficiency should be pursued in all sectors.
Economic growth does not imply using more water.

Yearly change in gross value added (GVA) and water-use efficiency (WUE) values from 2006 to 2018 for the 86 countries

Trend in gross value added and water-use efficiency values from 2006 to 2018 for the 86 countries with an available data series (reference year = 2006)

GVA and WUE values are growing at a similar rate from the 2006 reference year, though WUE growth has been smaller, indicating that the sustainability of economic growth could still be jeopardized by its dependency on water resources.
