

# The Potential of Gender Contextualisation in Your Country

## Discussion Points

---

1. How can we make the **IMI-SDG6 gender contextualization more relevant and useful for countries** to incorporate gender issues into water and sanitation policy development?
2. What are some **innovative solutions to overcome the constraints and/or limitations** identified by the pilot country, such as lack of awareness, advocacy, high-level commitment, coordination mechanisms, human resources, technical knowledge/skills, gender disaggregated data, and/or funding? How can these solutions be scaled up and replicated in other countries?
3. What are some **key capacity development needs at the national and/or sub-national level** to identify, analyze, and monitor gender aspects in water-related policy, planning, and procedures? How can these capacity development needs be addressed through training, education, mentorship, and other forms of support?

# Presentation of Surveys

---

As a continuation of this country consultation webinar, the IMI SDG6 will share two online surveys with participants.

The surveys are as follows:

- 1. Review Survey on the Assessment Framework tools**
- 2. Feedback Survey on Capacity Development Needs**

Please **complete the surveys within 4-weeks**, from when received.
